1. General Information

Course code	:	FRM 513
Course Title	:	Urban Ecology and Environment
Number of credits	:	3
Course duration	:	18 weeks
Level	:	Postgraduate
Course Teacher	:	Dr. Shah Murtaza Mushtaq Dr. Akhlaq Amin Wani Dr. Aasif Ali Gatoo Dr. M. A Islam
Pre-requisite	:	Basics concepts of ecology.

Disclaimer: The European Commission's support for the production of this publication does not constitute an endorsement of the contents, which reflect the views only of the authors, and the Commission cannot be held responsible for any use which may be made of the information contained therein

2. Course description

The course introduces the basics of Urban ecosystem, cause and effects of urbanization, adaptive and resilient urban development, climate and related risks and strategic developmental management.

3. Course objectives

The course prepares students for careers as leaders in understanding urban ecology, biodiversity conservation and management for sustainable development. It prepares the students to evaluate environmental and social impacts to deal with global challenges of climate change in cities.

4. Course outcome

On completion of this course, the students would:

- Gain a wider understanding of urban ecological and environmental issues ranging from biodiversity to climate resilience and appreciate potential approaches for cities to deal with ecological and environmental challenges and threats of climate change.
- Enhance abilities and skills relating to evaluation of environmental and social impacts of urban development.

5. Course structure

	UNIT 1
Week1	<ul style="list-style-type: none"> • Concepts of urban ecology:
	<ul style="list-style-type: none"> • Theories of urban ecology and linkages with sustainable urbanism
Week2	<ul style="list-style-type: none"> • Concepts of Eco cities, smart cities, compact cities etc.
	<ul style="list-style-type: none"> • Challenges and opportunities of urban, rural and peri-urban growth.
	Practical: Vegetation analysis and characterization of green spaces in nearby urban areas..
	UNIT 2
Week3	<p>Green Spaces, bio-diversity conservation and conflicts:</p> <ul style="list-style-type: none"> • Urban greens: challenges and choices for management
	<ul style="list-style-type: none"> • Human nature interactions and urban forest management
Week4	<ul style="list-style-type: none"> • introduction to functional diversity and traits
	<ul style="list-style-type: none"> • Bio-diversity conservation conflicts
Week5	<ul style="list-style-type: none"> • Spatial dimensions of urban ecology
	Practical: Identifying challenges in soil waste management in nearby urban areas.
	Mid Term Exam
	UNIT 3
Week6	<p>Urban Environment:</p> <ul style="list-style-type: none"> • Introduction to urban morphology
Week7	<ul style="list-style-type: none"> • Industrial ecology and symbiosis
Week8	<ul style="list-style-type: none"> • Management of air quality and noise
Week9	<ul style="list-style-type: none"> • Urban solid waste management
Week10	<ul style="list-style-type: none"> • Urban water ecological challenges.
	Practical: Urban Risk assessment and mitigation in urban areas
	UNIT 4
Week11	<p>Impact Analysis and Ecological Footprint Analysis:</p> <ul style="list-style-type: none"> • Environmental Impact Analysis 10 25
Week12	<ul style="list-style-type: none"> • Social Impact Analysis and Strategic Environmental Assessment
Week13	<ul style="list-style-type: none"> • Urban metabolism and Ecological Footprint Analysis.

 Disclaimer: The European Commission's support for the production of this publication does not constitute an endorsement of the contents, which reflect the views only of the authors, and the Commission cannot be held responsible for any use which may be made of the information contained therein

	UNIT 5
Week14	<ul style="list-style-type: none"> Ecological risk assessment framework (Definition, Problem formulation, Risk analysis, Risk characterization, Risk management).
Week15	<ul style="list-style-type: none"> Climate change, mitigation and adaptation
Week16	<ul style="list-style-type: none"> Climate modifications and managing climate change challenges in cities
Week17	<ul style="list-style-type: none"> Adaptation and mitigation measures to make cities resilient.
	<ul style="list-style-type: none"> Ecosystem services and nature-based solution to address urban resilience
Week18	Practical Exam/Assignment submission/Presentation
	End Tem Exam

5. Course structure

	<p style="text-align: right;">In Class Lectures</p> <p style="text-align: right;">Students will be able to</p> <ol style="list-style-type: none"> 1) The basics of Urban ecosystem, cause and effects of urbanization, adaptive and resilient urban development, 2) Climate and related risks and strategic developmental management.
	<p style="text-align: right;">Lab Exercises</p> <p style="text-align: right;">Students will be able to study</p> <ol style="list-style-type: none"> 1) Vegetation analysis and characterization of green spaces in nearby urban areas. 2) Identify challenges in soil waste management in nearby urban areas. 3) Urban Risk assessment and mitigation in urban areas.

 <h1>Google Classroom</h1>	<p>On line Tutorials Google Class Code: rghgtnc</p> <p>Students will explore and learn more about</p> <ol style="list-style-type: none">1) Basic concepts of remote sensing, GIS and GPS and its applications through lectures notes.
	<p>Assignments/Presentation</p> <p>Students at individual level and in groups will explore and learn more about</p> <ol style="list-style-type: none">1) Ecosystem Services2) Heat Island Effect3) Air/Water/Noise Pollution4) Urban allotment gardens-peoples motivation and practices5) Permaculture as a potential tool for sustainable food production6) Urban solid waste management

6. Course Assessment

Mode of assessment	% of marks
Quiz 1	5
Mid Term (Objective and Written)	20
Practical/Assignments (Discussion)	25
Quiz 2	5
End Term (Objective and Written)	45
Total	100
