URGENT (SKUAST-K) Sustainability

URGENT project funded by Erasmus+ of the EU has been successfully implemented at SKUAST Kashmir, one of the partner institutions from India besides others from Europe and Mongolia. The project enabled us develop research infrastructure and redefine academic curriculum as per the global standards in terms of Urban resilience and adaptation. The project helped us explore research opportunities and teaching upgradation under the selected themes of the project, integrating rich experience from Europe and Mongolia. Under the project our students and faculty members had exchange programs for trainings, summer schools and workshops at European and Mongolian Universities promoting educational and cultural exchange at its best. This cross cultural educational upheaval lifted our motivation to bring desirable changes in the overall academic system and research framework at our institute. Besides, we hosted several faculty members and students from different Universities/Institutes across Europe, Mongolia and India. We at SKUAST-K conducted several workshops, seminars besides hosted several expert talks from partners including Estonian University of Life Sciences, Martin Luther University, National University of Mongolia and Mongolian University of Life Sciences both offline and online. The collaborations have opened new opportunities for us at SKUAST-K in terms of joint research, student exchange and course upgradation as per the prevailing global needs. This has strengthened our network as an institution for the benefit of faculty members and students. To keep this momentum going, we strive to continue our research and academic collaboration by entering into agreements with most of the URGENT partners. Such collaborations would come free on account of the expertise, utilization of URGENT equipment and availing courses developed under the project.
